

Tail Pipe Clamp Installation Tip

I have found a unique pair of vise grips at Harbor Freight, about \$10, used for removing oil filters and such.

They work really great on installing the tail pipe clamp.

This allows the compression of the tail pipe clamp so the nut can be easily started on the bolt, then the wrench is removed and you can tighten the nut with two wrenches until you can insert a cotter pin. Do not tighten any more than that, on either the regular or insulated clamps.
